Subject: 447- -TV in view pf driver All, It appears we cannot use the above code at all if the driver is watching TV on their mobile. On the PNLD it states the below:

109(2) In this regulation television receiving apparatus means any cathode ray tube carried on a vehicle and on which there can be displayed an image derived from a television broadcast, a recording or a camera or computer. This does not relate to a mobile phone as they do not have a CRT. This only relates to the old TV Sets! If we have evidence that the driving is below the standard we could do Inconsiderate or WDC but other than that maybe the 105 ❖ Not position to have full view if the driver is watching the mobile?? Let me know what you think.
